                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ρy
                cc encode corn tassel-derived polypeptides (CDPs). The copy sequences (I) cc can be used for determining altered gene expression, to recover cregulatory elements and to follow inheritance of desirable characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated with growth and development, disease resistance, environmental cadaptability, quality and yield, and as molecular markers for studying inheritance of multigene traits in a plant breeding program. (I) can be cused to produce a tassel-specific profile of gene transcription, a created transcript image, to clone regulatory elements for use in transformation vectors, to express a polypeptide, to identify, isolate or extend constitution or related corn tassel nucleic acid sequences from DNA clibraries, in nucleic acid hybridisation or amplification technologies, as probe for use in Southern or Northern hybridisation, and to identify the presence of and/or to determine the degree of similarity between two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence describes a purified corn tassel-derived polynucleotide sequence (cdps) comprising a nucleic acid sequence selected from those given in ABL70627 to ABL70833. The cdps sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inheritance; characteristic; growth; development; disease resistance; environmental adaptability; quality; yield; molecular marker; multigene trait; plant breeding; corn tassel; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel purified corn tassel-derived polynucleotide useful for determining altered gene expression, to recover regulatory e.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (LALG/)

```
The invention relates to a nucleic acid comprising a sequence (I) of at least 18 bases in length of a segment of chemically pre-treated genomic CDNA which has any one of the sequences of (ABK33919-ABK34022) or its CC complement. Also included are an oligonuclectide on peptide nucleic CC acid (or set thereof) of at least 9 nucleotides which hybridises to (I), CC primers for (I), probes for detecting cytosine methylation or single-CC nucleotide polymorphisms (SNP) in (I), an array of oligomers CC or peptide nucleic acids for analysing diseases associated with the CC methylation states of the CpG dinucleotides of (I). The array is useful CC for determining genetic and/or epigenetic parameters, classification, CC differentiation, grading, staging, treatment and/or diagnosis of CC astrocytomas, or the predisposition to astrocytomas by analysing cytosine CC methylations, involves obtaining a biological sample containing genomic CNAP, extracting the genomic DNA, converting cytosine bases which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       identifying methylation status of one or more cytosine positions, and analysing methylation status of the cytosine positions by reference to one or more data sets. The genomic DNA is chemically treated by using a bisulphite, hydrogen sulphite or disulphite. The amplification or bisulphite is of particular interest in astrocytoma or brain tissue, based on the specific genomic methylation status of brain tissues, as opposed to background DNA. The amplificates carry a fluorescent label or radionuclide. Optionally, the labels of the amplificates are detachable molecule fragments having a typical mass which are detected in a mass spectrometer. The fragments of chemically pre-treated genomic DNA to be amplified, have a single positive or preferably, the amplificates or fragments of the mass spectrometer. Preferably, the amplificates or fragments of the mass spectrometer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a nucleic acid (I) comprising a sequence at CC least 18 bases in length of a segment of chemically pretreated DNA (II) CC of genes associated with development selected from 87 genes listed in CC the specification such as ACCPN, ADFN, or AFP1 and comprising one of 350 CC useful for the diagnosis or their complements. The invention is CC useful for the diagnosis or therapy of diseases associated with CC development genes, in particular disease related to homeobox containing GC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes CC associated with congenital heart diseases, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related with the CC distone deacetylation, Currarino syndrome, diseases related with the CC oligomers specific to each of the genes are useful for detecting the CC methylation state of all CDG dinucleotides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonucleotides for CC the amplification of the 350 sequences, (II) and/or their complements and CC single nucleotide polymorphisms (SNPs).

CC Single nucleotide polymorphisms (SNPs).

CC Single nucleotide polymorphisms (SNPs).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome cc that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic concerns and read in the area invention. AAK64942 to AAK64950 and AAM82169 represent invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid sequences given in AAM82170 to AAM81921. (1) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (1) components and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (1) expression. For cerample, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to cerample the patients own production of (1). Additionally, (1) cerample conditions may be used to produce the secreted (1), by inserting the nucleic acids into a host cell and culturing the cell to express the complement into a host cell and culturing the cell to express the complement of the proteins and polynucleotides may be used to prevent, (2) cancers and cancer metastases of haematopoietic-derived cells. AAK64703 ce sequences from the present invention. AAK54942 to AAK54950 and AAM82169 ceppresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                     Saccharomyces
                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, eppilepsy, neurofibromatosis, rheumatoid arthritis, psorlasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The invention relates to novel transgenic organisms useful in the production of functional food and drink products for the treatment or prevention of obesity via the regulation of lipid metabolism. The organisms comprise a polynucleotide encoding a growth hormone fragment capable of stimulating the activity of hormone-sensitive lipase (the key enzyme in lipolysis) and inhibiting acetyl COA carboxylase (the key enzyme in lipolysis) and inhibiting acetyl COA carboxylase (the key enzyme in lipolysis) and inhibiting acetyl COA carboxylase (the key enzyme in lipolysis) and provent hormone fragment preferably contains at least the disulphide-bonded loop of a mammalian growth hormone (but is not the full-length growth hormone) and is optionally linked to an epitope tag or heterologous fusion protein partner. The transgenic organism may be a microorganism used to produce a fermented product (e.g., yeast), or an edible plant or animal or cell thereof. Food or drink made using methods of the invention are used to modify fat/lean

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          livestock raised for meat production. In the exemplification of the invention, the human growth hormone (hGH) fragment analogue AOD9604 expressed in yeast, optionally fused to the FLAG epitope (AAB73625). The present sequence is described as a DNA sequence from yeast in the sequence listing, but is not further referred to in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δδ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     to a vertebrate cell preferably a mammalian cell, such as a human cell.

Comparticle, or by transfection, transduction, or injection either in vitro particle, or by transfection, transduction, or injection either in vitro cor in vivo. The vector is useful for the delivery and expression of complex transfection in gene therapy protocols, and for complex transfection in gene therapy protocols, and for complex transfection in gene therapy protocols, and for complex transfection in techniques such as complex transfections in techniques such as complex transfers and gene mapping. In pcr technologies, and in the production of sense or antisense nucleic acids. Vectors of the invention composed for stable integration and expression of heterologous DNA in host complex which can be delivered in an infected or transformed cell and compressed in a stable fraction. The current sequence represents a complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transformed cell and complex transfor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a recombinant entomopox virus (EPV) vector, comprising a polynucleotide encoding a protein operably linked with a heterologous promoter sequence. The invention also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polynucleotide encoding a protein invention are useful for delivering a polynucleotide encoding a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 50000 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful for treating diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and infectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS52214-AAS52838 represent the cDNA sequences of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been derived from a variety of human tissues. The invention also provides a method for producing proteins from these polynucleotide sequences. The proteins are useful for identifying compounds that modulate their activity and production, and the cell is also useful for identifying compounds that modulate expression of the polynucleotide sequences encoding the secreted proteins. The sequences of the invention are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel human guanosine triphosphate (GTP)-binding associated proteins (GBAPs; AAB68501-AAB68566) and their coding sequences (AAF58301-AAF58366). The proteins and coding sequences of the present invention are useful for treating a variety of disorders including inflammation, AIDS, Addison's disease, anaemia, arteriosclerosis, asthma, autoimmune disorders, Grave's disease, hepatitis, multiple sclerosis, cancer, diabetes, osteoporosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New guanosine triphosphate-binding associated proteins (GBAP) encoding nucleic acids, useful for treating and/or diagnosing associated with GBAP expression, such as cancer, diabetes and

                        The present invention provides a number of human metastasis associated genes which are modified by cytosine methylation. The sequences can be used in the diagnosis and treatment of cancer. The present sequence is one of the genes of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                   Claim 1; SEQ ID NO 60; 23pp +
                                                                                                                                                                                                                                                                                                                                                            06-APR-2001; 2001WO-EP03970

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
